Get Cart Open Plugin

What the getCartOpen plug-in does is looks for the very first instance of the scAdd event being set and adds the scOpen event at that same time. Each time after that the scAdd event is set, the scOpen event will not be set again.

Plugin Prototype

```
s.getCartOpen("s_scOpen");
```

Example

The plugin is used with the s.events call.

```
s.events=s.getCartOpen("s_scOpen");
```

Code

```
/*  
 * Plugin: getCartOpen  
 */  
s.getCartOpen=new Function("c","" + "var s=this,t=new  
Date,e=s.events?s.events:'' ,i=0;t.setTime(t.getTim"  
+"e()+1800000);if(s.c_r(c) || e.indexOf('scOpen')>-1){if(!s.c_w(c,1,t))"  
+"{s.c_w(c,1,0)}}else{if(e.indexOf('scAdd')>-1){if(s.c_w(c,1,t)){i=1}"  
+"else if(s.c_w(c,1,0)){i=1}}if(i){e=e+',scOpen'}return e"});
```
