Get Visit Start Plugin

The getVisitStart plug-in is used to determine first page of a visit. It returns 1 on the first plugin call of the visit, otherwise returns nothing. It uses a 30-minute cookie if possible, otherwise reverts to a session cookie. It always returns 0 if 30 minute or session cookie can't be set.

Plugin Prototype

s.getVisitStart(c)

Parameter Descriptions

c=cookie name for tracking ("s_visit" is standard)

Example

Here is an example use of the plugin to populate an s.prop variable with a value on the first page of the visit.

```
s.propx=s.getVisitStart("s_visit"); -- would return 1 on the first page of the visit, nothing all the remaining pages.
```

Code

```
/*  
 * Get Visit Start  
 */  
s.getVisitStart=new Function("c","  
+\"var s=this,v=1,t=new Date;t.setTime(t.getTime()+1800000);if(s.c_r(c\"  
+\" \")){v=0}if(!s.c_w(c,1,t)){s.c_w(c,1,0)}if(!s.c_r(c)){v=0}return v;\"");
```
